If you don't use a computer often, but still use it from time to time, you have probably experienced the great inconvenience of typing with one hand. Some people cannot type with their left hand or their writing skills are limited in some way. In these cases, you can use a keyboard that is a little different. You will have to take into account that a keyboard is not the same as a laptop keyboard, due to the limited space. Using a laptop computer, you are in full control of what is coming out of the keyboard. You can tell how it looks, what keys are missing or if they are working, but not with the case of a keyboard that is meant only for fun. Even if it does not have a separate screen, you can use a laptop to see what is being typed. #ifndef BOOST_MPL_EMPTY_FWD_HPP_INCLUDED #define BOOST_MPL_EMPTY_FWD_HPP_INCLUDED // Copyright Aleksey Gurtovoy 2000-2004 // // Distributed under the Boost Software License, Version 1.0. // (See accompanying file LICENSE_1_0.txt or copy at // // // See for documentation. // \$Id\$ // \$Date\$ // \$Revision\$ namespace boost { namespace mpl { template struct empty_impl; template struct empty; }} #endif // BOOST_MPL_EMPTY_FWD_HPP_INCLUDED 2019-11-22T13:55:07+00:00 2019-11-22T13:55:07+00:00 2019-11-22T13:55:08+00:00.
