It provides the same toolset that you would expect of an industry standard graphics program. It supports layers, transparency, and so on. \*\*Figure 4:\*\* GIMP provides many of the functions you would expect of a professional level image manipulation program. The GIMP interface is organized into toolbars that are right next to the image and contain all the tools you need to create and modify images. The default UI is very similar to the Windows interface, which is good for beginners because you can find where you need to go with minimal effort. The interface should look the same on a Mac. For further information on using GIMP, click here. ## Using Photoshop's Actions Actions are a tool that lets you automate repetitive tasks on a project. You can use Photoshop's actions panel ( \*\*Figure 5\*\* ) to create action sets that capture a button press or a mouse click, for example. The result is that you can fire off the same image editing task over and over. A good example is shooting hundreds of images on a tripod, where you press the shutter button and the action fires off a series of images. \*\*Figure 5:\*\* Photoshop allows you to create your own image editing actions. Actions can also be used to create textured texture backgrounds, for example. After creating a texture background, you can load the action into Photoshop to enhance the look of a brochure. Because Photoshop actions are customizable, you can use the action to create simple modifications to files, like shrinking a photo of the family and eliminating the background

1. Field of the Invention The present invention relates generally to a data storage system. In particular, the present invention relates to a magnetic storage system incorporating a head stack assembly with a ramp load structure that reduces the wear and potential damage to the head stack assembly caused by contact between the head stack assembly and a stationary surface. 2. Description of the Prior Art A magnetic disc drive unit for high density data storage is shown in FIG. 1. The drive unit includes a disc subassembly 14, having a base plate 10 and a magnetic disc 12 enclosed by and mounted on the base plate. The disc subassembly 14 is rotatably mounted to an actuator arm 24 of a head stack assembly (HSA) 20. The HSA is rotated by a voice coil motor (VCM) 28. An arm extension 16, which is a tapered extension of the actuator arm, carries a sensor 18. A read/write head 22, which comprises a read element and a write element, is mounted at the distal end of the HSA. The HSA 20 is secured to a load arm 30 by means of two screws 32, one at each end. The load arm 30 is secured to a suspension 34 at a point near the distal end of the load arm. The HSA 20 is urged against the surface of the disc 12 by the suspension 34. The suspension 34 is secured to the load arm 30 by means of one or more separate fastening screws 36, 40, which can be tightened by a tool such as a screwdriver or a similar device. The actuator arm 24 carries a coil 26 around which a current is passed to produce the VCM 28. The VCM 28 in turn causes the HSA 20 to rotate against the surface of the disc 12, in turn causing the read/write head 22 to move across the surface of the disc, thereby writing information to the disc or reading it from the disc. The surface of the disc 12 is typically divided into a plurality of concentric data storage tracks 42, which are also concentric with the center of rotation of the disc. Each track 42 can be further divided into a plurality of data sectors, and information is typically recorded on the track 42 in sectors of fixed size, e.g. 512 bytes or 528 bytes. Data is recorded on the track 42 along a spiral path, with the tracks typically being spirally arranged about the disc with, for example, 0.050 inch, 0.080 inch, and 0.100

### What's New in the?

Get ready for the power of microfinance With millions of unbanked people living on less than \$1 a day and the great majority of them women, it's little wonder that microfinance organisations have been trying to help more than ever before. Governments and the private sector have responded in different ways, with the majority of existing funding focusing on agriculture-based loans in the developing world, most notably in India, or microfinance for women (of which there are several types). But microfinance is under threat from different sources. The first is the advance of technology. Personal digital wallets are becoming the norm, and it's not just consumers who want to be able to access their money and make payments via their phone. Mobile money apps can help customers in many parts of the world, but they are not universal. Digitization also creates new risks, such as digital theft, and is creating conflicts over how transactions should be dealt with. But there is another more powerful force at work. Over the last ten years or so, big banks have become increasingly wary of small businesses and have focused more and more of their money and their staff on lending to large corporations. Their fear has been that they will lose business to start-ups, and it's true that microfinance organisations often offer cheaper terms to start-ups with greater growth potential. So if big banks stop lending to smaller firms, a lot of small firms will suddenly find themselves with less cash, and they will need to find somewhere else to borrow money. It is exactly this point that the technology of the emerging world – in particular, smartphones, and mobile money – offers the banks. It's becoming very difficult to get a loan from a big bank or a credit union, but through the emerging world, getting a smartphone is becoming very easy. Even more importantly, without a smartphone, it is very difficult to pay a bank on time – the Indians call it 'kanun' – unless you have a lot of money in your bank account. So if people can get phone credit, they will just be more likely to pay their banks on time, and be less tempted by payday loans. If some people are able to get their smartphones paid for by their banks, this will reduce the risks for other people. As the old saying goes, a rising tide lifts all boats – but not just all boats in a good mood. For instance, in the big cities of the developing world
