KeyMacro is a plugin that allows you to control the amplitude of each of your keyboard's tracks. There is a physical button and physical LED on the bottom of each track that lets you control the amplitude of each track with the slider. You can activate the LED's to turn on/off while playing your song. You can also choose which LED's turn on first when your song is started. Use this plugin with a Korg Kaoss Pad, Roland AXI or any other programmable instrument that has a Midi in and out to map to the physical button on the keyboard. Customer Reviews Overall Review by StrangeLineMaster 3/22/2010 This plugin really helped me to edit my music and give a bigger sound to my songs. But it does not have good controls. It is designed to have good controls and good effects to make you a better musician. I really like this plugin. It has good effects and good control so you can edit your song easily. Overall Review by Jamal 7/13/2009 This thing is amazing. I have been looking for a compressor to my DAW (and i didn't get it to work in another one), so i bought this. After i got it i thought about buying some big name ones. But i started to listen to it and i though it was way better then the other big ones (ok, maybe not best). It is really easy to use, have cool controls (without the unnecessary ones in the others), has good quality sound, also it is really effective (after some weeks of usage). I would definitely buy it again. Overall Review by Oldschoolmaster 7/2/2009 Great compressor/expander. Can be a little hard to get the look/feel you want to in the original control panel (can't hide the controls/pad). It sounds much better than any other plugin, which may cost you as much if not more. Overall Review by Filson 6/25/2009 I have had this plugin for a few months now and I have to say that it is one of the best effects plugins I've ever used. I used it to compress one of my songs for my first CD and I was very impressed with how much better 1d6a3396d6

The Black Raven audio mastering suite combines an intuitive interface with powerful, comprehensive tools to help you produce your best-sounding CD. Black Raven offers state-of-the-art plug-in technology that's perfect for every level of mastering: from stereo to surround. Black Raven includes two powerful mastering plug-ins, Black Raven Mastering Suite and Black Raven Mastering for the Producer. Black Raven Mastering Suite Master, a 64-bit mastering plug-in, features extensive frequency-based controls for compression and saturation. It also has four different stereo mastering modes (coupled, uncoupled, mono, and mono to stereo). Black Raven Mastering Suite Master includes advanced stereo bus/A-B processing for both mono and stereo mixes. Black Raven Mastering for the Producer offers a flexible control set and high fidelity surround processing. Black Raven Mastering for the Producer features extensive high frequency transparency, high dynamic range, and wide-band compression. A surround-only version of the plug-in is also available, with the same controls but different algorithms. Black Raven Mastering for the Producer includes four advanced stereo mastering modes (coupled, uncoupled, mono, and mono to stereo), a stereo bus/A-B processor, extensive high frequency transparency, high dynamic range, and wide-band compression. A surround-only version of the plug-in is also available. There are three stereo expansion plug-ins available in Black Raven. The first, Black Raven Excite, has two stereo expansion modes. Black Raven Excite includes mid-side processing and two-way stereo delay to tailor the plug-in's compression to the mix. The second, Black Raven X-Way, offers versatile two-way stereo delays that can be used for high-pass/low-pass filtering. The third plug-in, Black Raven DelinQ, offers a graphical interface and can be used for mastering in either stereo or surround. Black Raven provides four surround processing plug-ins. The first, Black Raven XG, offers stereo delay (time and phase), cross-feed, and compression for all four surrounds. Black Raven XG includes stereo expansion modes, stereo panning, and mid-side processing. The second surround, Black Raven XX, is a stereo expansion and processing plug-in. Black Raven XX is also a stereo processing plug-in with a high-pass/low-pass filter. Black Raven combines a number of tools into a single, intuitive interface

The MasterComp plug-in provides an advanced but efficient multi-channel signal compressor, the original PSP compressor is a high fidelity stereo dynamics processor. Main Features: Multi-channel compressor can be used as a master bus for mixing purposes. Compression can be set independently for each channel, adding up to a vast range of possibilities for compression and density processing. The plug-in provides controls for compressors, expander and limiters. Master Compressor can also be used for normalizing the volume of a bus, a process often used in mixing to equalize the volume of the channels. Normalizing the volume of a bus can also be used in mastering as a "volume lift" for the master bus. Even if the master bus is already compressed, the MasterComp plug-in makes it possible to lower the compression ratio, providing a mastering environment similar to that of a DAW. Compressor controls: Use the sliders to control the overall compression, ranging from -20dB to +20dB (2). Use the gain reduction factor setting to control the threshold and ratio of the compressor. Use the ratio (R) control to control the compression ratio of the compressor. Use the attack control to control the processing time before the compressor starts acting on the signal. Use the slow release control to set the release time, which determines how long the compressor takes to release once the threshold is reached. Use the threshold control to control the sensitivity of the compressor. Use the depth setting to control the amount of distortion introduced by the compressor. Use the headphone/monitor control to set the monitor level before the compression of the bus takes place. Use the monitor gain setting to control the monitor gain level before the compression of the bus takes place. Expander controls: Use the gain reduction factor setting to control the threshold and ratio of the expander. Use the ratio (R) control to control the expansion ratio of the expander. Use the threshold control to control the sensitivity of the expander. Use the slow release control to set the release time, which determines how long the expander takes to release once the threshold is reached. Use the attack control to control the processing time before the expander starts acting on the signal. Use the right/left control to control the left/right mode of the expander. Use the right/left balance control to control the overall balance of the expander. Use the headphone/monitor control to set the monitor level before the expansion of the bus takes place. Use the monitor gain setting to control the monitor gain level before the expansion of the bus takes place. Limiters controls: Use the limiter threshold control to control the sensitivity of the limiter. Use the limiter fast attack control to control the processing time before the limiter starts acting on the signal. Use the limiter slow attack control to set the release time.
