What Is Photoshop? Adobe Photoshop is a powerful software program that allows users to create and manipulate digital images. It is a raster graphic editor—that is, its work is based upon the components of a pixel. Each pixel is the smallest unit of an image file, and by manipulating pixels, you can create and edit images. Photoshop is the most powerful image-editing software available for PCs. It can be used to enhance images or to create novel artwork by combining multiple images with different layers. A typical Photoshop system will have a hard drive, disk drive, and all the necessary monitor, video card, and printer hardware. The Macintosh version, which is increasingly popular, works with Apple's Macintosh computers. Photoshop also supports embedded hardware in its DVI and PDI versions. Those who want to edit images with a high-powered media card instead of using an external peripheral can use Photoshop's ExpressCard or PCMCIA versions. Both versions use image compression and decompression technologies that make the files easier to transport. Adobe Photoshop Software Photoshop Elements, a more basic, basic version of the software, is included in Photoshop as a free download.

Elements is an all-purpose, yet fairly small, image editing program that is great for beginners and for those who are looking for good basic image-editing features. Photoshop

Elements 3 offers a complete set of image-editing tools for both beginners and professionals alike. Adobe Photoshop CS4 is the fourth version of the program. For budding artists and professionals, Photoshop CS4 is a superb upgrade to Photoshop CS3.

Photoshop CS4 includes some of the same features as Photoshop Elements 3, in a package that is competitively priced. Photoshop CS4 also has many of the enhancements and changes from Photoshop CS3. For the inexperienced user, it should be considered a basic upgrade if you want a way to start using Photoshop. Adobe Photoshop CS5 is a major upgrade to Photoshop CS4, offering significant enhancements and many of the

missing features from Photoshop Elements. Although this edition is aimed at the most-experienced professionals, it is still good for the novice. Adobe Photoshop CS5 lets you work in more complex images. It can also display complex graphics and create realistic images. Adobe Photoshop Lightroom has been in development for some time, allowing you to organize, catalog, and manipulate digital images. Lightroom comes with a database that

Canucks' Powerplay is one of the best in hockey There's a reason behind all the constant talk about a power play. The amount of production, variety, creativity, and skill one can see in there is undeniable, which is why the league is continually trying to contain the Cupboards overflowing with points Vancouver has accrued as a result. Without the power play, look at that team. The Canucks are clearly a league average team in terms of the puck possession rate and expected goals. But when they score a power play goal, look at all that positive puck possession. On Friday night in Nashville, the Canucks enjoyed a power play at the half to knot up the game, and, after that, nobody touched the puck. Vancouver finished with five power play goals and nine points in three games, most of them coming off the first man advantage. But they always had two other players on the ice, and, if you can count forwards as defencemen, no players from Nashville started more than three shifts without the puck. That's incredible production from power play and that's what it takes to have an elite power play. It's not the first time this season the team has been this dominant, either. Remember those six straight games they went on, from February 8 through 15, where they scored five or more power play goals in a row? In fact, the first time they didn't score 5+ power play goals in a row all season was on February 11. If this is an aberration, well, that's also true of the first time they had a 5+ power play goals in a row, that being Jan. 10-16. And, of course, their only failure to get five or more power play goals in a row came in a game they played one of their best games of the season. Either way, whether this continues or it's just a blip, it's got to make Canucks' fans, critics, and pundits try to figure out what to do with it. And, as luck would have it, they have two guys who specialize in nothing else but power plays. Entering Friday, Brock Boeser (18 goals) and Elias Pettersson (15 goals) had combined for

## What's New in the Photoshop 2022 (Version 23.1)?

Neighborhood matters. We all know it, and it has become increasingly clear to urban planners and architects that this is the case as more people want to live in walkable, vibrant, mixed-use neighborhoods. The public should be able to exercise the same freedoms they enjoy in the city on the property they own. People need to have a place to shop, socialize, work, dine, conduct business, and get children to school safely. This means we must promote suburban planning. We must think differently about the design of communities and the environments that connect them. And we must do this in a way that protects and preserves the very unique character and natural beauty found in the suburbs. As a result, we must make sure that all suburbs are built sustainably and responsibly, promoting the kind of abundant, diverse, and economically successful communities that are so characteristic of the suburbs in the United States. And the suburbs must become the focus of the national transportation policy debate, not a side issue. It's clear that American motorists and commuters are headed toward a crash and burn scenario. Every day our vehicles get bigger and bigger, people are commuting longer distances, the percentage of Americans who own cars and even trucks is shrinking, and the toll of congestion and pollution is unbearable. This is not a sustainable approach to planning for the future. We must embrace compact, diverse communities. The suburbs are where we need to focus our attention. Although we have made great strides in getting Americans to drive less, as the number of miles we drive continue to increase, it's hard to imagine that major job centers will remain in the suburbs. The

suburbs are already less attractive to young people and new families, as they choose to live in dense, multi-modal communities with a walkable urban core. In short, it's time we get serious about the suburbs. We must think differently about the design of communities and the environments that connect them. And we must do this in a way that protects and preserves the very unique character and natural beauty that is so characteristic of the suburbs. The suburbs must become the focus of the national transportation policy debate, not a side issue. We have succeeded to a large degree in bringing buses into the center of the transportation policy discussion, and we need to do the same for rail, light rail, and bike and pedestrian transportation. We need to embrace compact, diverse communities. The suburbs are where we must focus our attention.
